

## Flea Prevention Dos and Don'ts

### **Maximize the effectiveness of your dog's flea treatment.**

Once you've selected a flea and tick preventive for your dog, use it properly for maximum effectiveness and safety.

**DO** follow label directions to the letter. Reputable products outline safety concerns.

**DON'T** assume a dog flea and tick product will work on your cat. The two species have different physiological makeups, and you might harm your cat if you use a product designed for a dog.

**DO** ask your veterinarian or product manufacturer if you are uncertain about usage of dosage.

**DON'T** engineer an all-out assault by combining several flea and tick products without consulting your veterinarians first. Some combinations can cancel the effectiveness of others or cause harm to you and your dog.

**DO** be vigilant in your treatment plan even if you don't see any more fleas or ticks. Regard these rapidly reproducing pests as constant threats.
