

Vaccinating Your Puppy

Puppy vaccinations are necessary for a healthy life.

Julie Ryan Johnson, DVM

Vaccine Boosters

Historically, most vaccines were boosted one year after the initial puppy vaccinations. Veterinarians are now re-evaluating existing protocols in vaccination schedules.

Disease Free for Life

When your puppy becomes an adult, he still needs to receive booster vaccines. Ask your vet how often your dog should be vaccinated and which vaccines it should receive. By staying current on your dog's shots, you can help keep him healthy and disease free for many years to come.
